Introduccion

The Al Hayat Company's IT department is almost entirely managed by Iraqi nationals, which have exceptional experience in executing and developing client projects under the most aggressive time schedules and within severe conditions. Their knowledge and skill set have been finely developed over many years to ensure the best quality services are provided. Our team is highly experienced within many specialties and expertise, they have proven ability to be exceptionally pro-active and organised when performing projects throughout Iraq.

Al Hayat Company is partner with the Ministry of communication - SCIS (State company for internet services) <https://www.scis.gov.iq/index.php>, we offer services for Iraqi Government with a high performance, low risk system dedicated towards client success. We perform all projects with all our experience learned and best practices in mind with an aim to provide the same service to all clients internationally.

History

We have provided internet services in Iraq through VSAT systems since 2003, under the name Ghost office for computer & internet services. We started with very few terminals at the beginning, this number has significantly grown over the years, and is continuously rising. We have now reached the maximum number of terminals throughout Iraq. Our clients are from different sectors, starting from government offices and private companies to US military sites, non government organizations, private companies and finally the normal customers that open internet cafés.

In 2008 we predicted that the fiber internet service was going to expand even more than the VSAT systems. As a result, in 2009, we established our fiber optic Internet division. We planned to distribute this service through wireless radio waves or via optical fiber. We also provide fiber optic connectivity to all Iraqi cities through I.T.P.C (Iraqi Telecommunication & Post Company) and exchanges through all major cities.
